

BHASKAR MISHRA

FULL STACK AI/ML ENGINEER | FULL STACK DEVELOPER | DEVOPS ENGINEER

+91-9570269214 | harshmishra37992@gmail.com | Saket, New Delhi, India

GitHub: <https://github.com/HarshAAnsh> | LinkedIn: <https://linkedin.com/in/bhaskar90808> | Portfolio: <https://port-folio-phi-roan-57.vercel.app/>

PROFESSIONAL SUMMARY

Full Stack AI/ML Engineer with 3 years of experience spanning web application development, backend engineering, DevOps/observability, Python data analytics, ETL, and machine learning. Strong hands-on experience building production-oriented applications with React.js, Node.js, Express.js, Python, Django REST/FastAPI, ASP.NET/.NET, SQL/NoSQL databases, AWS/Azure, Docker, CI/CD, Prometheus and Grafana. Experienced in developing REST APIs, real-time applications, AI/ML pipelines, data-processing workflows, dashboards, monitoring systems, and cloud deployment automation. Comfortable working across the complete lifecycle from requirements and architecture through development, testing, deployment, monitoring, and support.

KEY SKILLS

AI / Machine Learning: Python, Machine Learning, Scikit-learn, TensorFlow, Keras, SciPy, Statsmodels, NLP, TF-IDF, Cosine Similarity, XGBoost, SVM/SVC, Random Forest, Decision Trees, Logistic Regression, Linear Regression, KNN, K-Means, Naive Bayes, PCA, Factor Analysis, Cluster Analysis, Bayesian HMM

Data Science / Big Data: Pandas, NumPy, PySpark, Apache Spark, Spark SQL, Hadoop, Hive, ETL, Data Cleaning, Data Validation, Feature Engineering, Exploratory Data Analysis, Predictive Modeling, Statistical Analysis, Data Mining, Data Visualization

Frontend: React.js, JavaScript ES6+, HTML5, CSS3, Bootstrap, Tailwind CSS, jQuery, Three.js, GSAP, React Router, Axios, Vite, REST API Integration

Backend / APIs: Node.js, Express.js, NestJS, Python, Django, Django REST Framework, FastAPI, C#, ASP.NET Framework, ASP.NET Core Web API, REST, SOAP, JWT, Passport.js, bcrypt, Swagger/OpenAPI, Socket.IO

Databases / ORM: Microsoft SQL Server, PostgreSQL, MySQL, Oracle, MongoDB, SQLite, Entity Framework Core, ADO.NET, Mongoose, Prisma, Django ORM, SQLAlchemy

Cloud / DevOps: AWS EC2, S3, Lambda, Systems Manager, Azure, GCP, Docker, Jenkins, Kubernetes, Terraform, Heroku, CI/CD, Git, GitHub

Monitoring / Logging: Prometheus, Grafana, Loki, Promtail, Windows Exporter, Blackbox Exporter, Pushgateway, Alerting, Windows Server, Task Scheduler

BI / Visualization / Tools: Power BI, Tableau, Plotly, Dash, Matplotlib, Seaborn, Jupyter Notebook, Anaconda, Postman, Visual Studio, VS Code, PyCharm

PROFESSIONAL EXPERIENCE

Altitude Software — Technical Consultant | Oct 2023 – Jul 2026

- Worked on software and web applications for internal usage and provided technical support to customers.
- Developed and maintained monitoring tools using Grafana to support smooth operation of contact-center services.
- Worked across frontend/backend development, databases, monitoring, troubleshooting, and deployment-related activities.
- Built and maintained a server monitoring and alerting solution using Prometheus, Windows Exporter and Grafana.

AI/ML & DATA ENGINEERING PROJECT EXPERIENCE

Cisco Data Center Switches — Telecom OSS Provisioning & Activation | Proximus Telecom, Belgium | Python Developer

Technologies: Python, Django REST, Oracle, Git, REST Web Services, Pandas, ETL, Statistical Analysis, HTML5/CSS, JavaScript, jQuery, AJAX, JSON, Bootstrap, AWS, Jenkins

- Worked on a telecom OSS solution related to provisioning, activation and inventory management for Cisco data-center switching infrastructure.
- Analyzed functional requirements/specifications and participated in client interactions for requirement clarification.
- Designed and developed frontend features using Python, HTML, CSS, AJAX, JSON, JavaScript, jQuery and Bootstrap.
- Developed backend functionality in Python/Django and implemented communication between client and server through secured web services.
- Created and tested dashboard features and responsive UI components using Python, JavaScript, HTML5/CSS, and jQuery.
- Worked with MongoDB-backed data to implement responsive vector maps and charts on web pages.

- Used Python collections and regular expressions for data manipulation, pattern matching, and application functionality.
- Implemented features using Test Driven Development and pair-based programming; performed unit, integration, GUI and web-application testing.
- Worked with Jenkins for continuous integration/deployment and supported AWS/OpenStack changes for large-scale data-center deployment.
- Used Beautiful Soup, mocking/patching techniques and automation scripts for testing and data-related tasks.
- Participated across the complete lifecycle including design, development, deployment, testing, implementation and production support.
- Collaborated with product management, UX teams and offshore development teams on product definition, scope, schedule and technical decisions.

Intelligent Payment Network (IPN) — ML-Based Payment Routing | *Revolut, United Kingdom* | *Python Data Scientist*

Technologies: Python, PySpark, Spark SQL, Plotly, Dash, Postman, Microsoft Azure, Docker, ETL, Machine Learning, Statistical Analysis, AWS/Redshift

- Worked on an intelligent payment-routing solution designed to improve transaction success by predicting the best payment terminal for each transaction.
- The solution used historical transaction performance and payment attributes to predict gateway/terminal success probabilities and support resilient routing decisions.
- Implemented a pipeline containing static and dynamic modules: initial filtering with static rules and logistic regression, followed by dynamic feature generation and terminal-behavior modeling.
- Built features around success rate, payment attributes and time lag, with adaptive time-decay processing and feedback mechanisms for continuously updated terminal behavior.
- Applied Random Forest classification to predict success probabilities for available terminals.
- Performed data exploration and feature selection using Python and SciPy and developed factor-analysis and cluster-analysis models for customer segmentation.
- Extracted raw data from heterogeneous corporate database sources, cleaned/transformed it, and prepared data for warehouse, BI and analytical workloads.
- Provided summary statistics and interpreted analytical outputs to translate model results into business insights.
- Worked with centralized enterprise data repositories and cloud data platforms including AWS/Redshift.
- Supported data acquisition, quality assessment, gap identification, multivariate analysis, predictive modeling, clustering and reporting activities.

SmartCart AI — E-commerce Intelligence & Recommendation System | *BigCommerce, USA* | *Python Developer / Data Scientist*

Technologies: Python, PySpark, Spark SQL, Plotly, Dash, Postman, Microsoft Azure, Docker, ETL, Machine Learning, Statistical Analysis, Pandas, NumPy, Scikit-learn, NLTK, Hadoop

- Worked on an ML-driven e-commerce recommendation and customer-intelligence solution supporting product recommendations and customer segmentation.
- Worked with content-based and collaborative-filtering concepts to support personalized product recommendations based on purchase history, product characteristics and similar-user behavior.
- Performed data exploration, feature selection, data enrichment and preprocessing using Python, Pandas, NumPy and SciPy.
- Built factor-analysis and cluster-analysis models to classify customers into target groups.
- Designed an A/B experiment to evaluate business performance of the recommendation system.
- Participated in data acquisition with data-engineering teams using PySpark and Spark SQL for historical and real-time data.
- Developed PySpark jobs for data cleaning and preprocessing, including missing-value handling, normalization, feature selection and distributed metric computation.
- Extracted data from databases and APIs using Python scripts, parsed JSON data, and loaded processed information into databases.
- Developed Spark SQL queries and exported processed result sets to MySQL for downstream analysis.
- Created Python automation scripts to reduce repetitive customer-query administration work; the source resume reports a 45% reduction in query-solving time.
- Built machine-learning classification models including XGBoost, SVC and Random Forest, and applied NLP techniques including TF-IDF and cosine similarity.
- Performed data mining lifecycle activities including data collection, cleaning, modeling, validation, visualization and gap analysis.
- Worked with SQL scripts, indexes, stored procedures, data lineage, data mapping and data-quality processes.
- Prepared reports and presented customer profiles, analytical results and strategic implications using Python and Power BI.

- Worked in Agile/SCRUM with data engineers, data scientists and cross-functional risk/non-risk teams.

FULL STACK / DEVOPS PROJECT EXPERIENCE

AI Image Generator — Full Stack AI Project | Jun 2026 – Jul 2026

Technologies: React.js, Tailwind CSS, Node.js, Express.js, Python, FastAPI, Stable Diffusion, SQLite

- Developed a full-stack AI Image Generator that converts natural-language prompts into AI-generated images using a locally hosted Stable Diffusion model without relying on third-party APIs.
- Designed a modern React and Tailwind CSS interface with prompt suggestions, responsive design, loading states, image preview and image-download functionality.
- Built RESTful Express.js APIs to manage image-generation requests, generation history and image deletion.
- Integrated a Python FastAPI microservice for AI inference and communication with the Stable Diffusion model.
- Implemented SQLite storage for prompt history, generated-image metadata and timestamps.
- Separated the frontend, API server, AI inference service and database into independent modules for cleaner architecture and maintainability.
- Added image gallery, history management and file-cleanup functionality to manage generated image storage efficiently.

CloudForge — Cloud Deployment Automation Platform | May 2026 – Jun 2026

Technologies: React.js, Node.js, Express.js, MongoDB, Redis, BullMQ, AWS EC2, AWS Lambda, AWS SSM, Socket.IO, Docker, JavaScript

- Designed and developed a cloud-native deployment automation platform that enables users to deploy Dockerized applications through a web-based control panel.
- Built a React frontend with onboarding and a real-time deployment dashboard that lets users track deployment status without refreshing the page.
- Developed Node.js/Express backend APIs to manage deployment requests, validate input and maintain deployment records.
- Implemented BullMQ with Redis to process deployment tasks asynchronously and reliably handle long-running deployment operations in the background.
- Integrated AWS EC2 and AWS Systems Manager (SSM) to remotely execute deployment commands and manage Docker container provisioning on cloud servers.
- Used AWS Lambda for automated post-deployment tasks such as environment configuration and service initialization.
- Implemented real-time deployment status updates using Socket.IO for deployment progress, completion and failure events.
- Designed MongoDB schemas for deployment requests, execution logs and deployment lifecycle statuses.
- Implemented error handling, retry mechanisms, and deployment logging to improve reliability and simplify troubleshooting.

Server Monitoring & Alerting System | Oct 2025 – Nov 2025

Technologies: Prometheus, Grafana, Windows Exporter, YAML, JSON, Task Scheduler, Windows Server

- Designed and deployed a server-monitoring solution using Prometheus, Windows Exporter, and Grafana to track system performance across multiple Windows servers.
- Configured Windows Exporter to collect CPU, RAM, disk, network I/O and service-status metrics.
- Configured Prometheus scrape jobs, metric ingestion and alerting rules for monitored servers.
- Built Grafana dashboards for uptime, resource utilization, disk-usage trends and service health.
- Integrated Grafana email alerting for thresholds such as high CPU, low disk space and service failure.
- Automated log cleanup using Windows Task Scheduler and created Grafana alerts to validate task execution.
- Resolved routing, data-collection and configuration issues after relocating Prometheus/Grafana services between drives and validated end-to-end monitoring reliability.

Web-Based FTP Access Platform | Jun 2025 – Jul 2025

Technologies: React, Vite, Node.js, Express, SQL Server, JWT, IIS, FTP, HTML, CSS, JavaScript

- Built a secure web application providing browser-based access to an FTP server hosted on IIS, with an administrative control panel for user management.
- Implemented authenticated access, role-based user management and permissions so users could browse FTP content without requiring third-party FTP clients.
- Developed the backend with Node.js and Express and connected it to SQL Server for user and application data.
- Implemented JWT-based authentication and built a responsive React + Vite frontend.

Automated Customer Support System | Oct 2024 – Feb 2025

Technologies: ASP.NET Framework, Bootstrap, HTML, CSS, JavaScript, React.js

- Developed an internal/partner ticketing tool to streamline customer-support work, ticket management and response handling.
- Designed web pages where users could submit ticket information such as issue details, occurrence and urgency.
- Developed APIs to save ticket information into the database and retrieve it when required.
- Contributed to frontend development using React.js, HTML, CSS, JavaScript and Bootstrap.

ADDITIONAL PROJECTS

Portfolio Website | React.js, Node.js, Tailwind CSS, Vite, Git, GitHub, Resend

Developed a responsive SPA with reusable sections for experience, skills, education, certifications, projects and contact; added animations, interactive elements, responsive layouts, and a Node.js/Resend backend API for message sending.

Social Media API | Node.js, Express.js, MongoDB, Socket.IO, JWT, Swagger

Built a RESTful backend with 15+ endpoints using MVC architecture, JWT/bcrypt authentication, user/friend/post functionality, real-time notifications and messaging, Swagger documentation, error middleware and MongoDB indexing. The source resume reports 98% API uptime during stress testing, 40% reduced response time for notifications and 30% lower API latency through indexing.

Weather Forecast App | React.js, Vite, JavaScript, Bootstrap, Weather API

Created a single-page application that searches cities and displays weather information, using the project to strengthen React component development, API integration, and Vite-based frontend development.

QR Code Generator | HTML, CSS, JavaScript, Tailwind CSS

Created a web page that generates a QR code from a URL and supports download, with a focus on practicing Tailwind CSS and frontend implementation.

Gemini Clone | React.js, Vite, JavaScript, Bootstrap, Gemini API

Created a single-page application using the Gemini API to implement AI-assisted functionality while practicing React components, API integration and Vite.

EDUCATION

Bachelor of Computer Application (BCA) — Manav Rachna International Institute of Research and Studies | 2020–2023 | 7.31 CGPA

12th (PCM) — BSEB | 2018–2020 | 81%

10th — BSEB | 2017–2018 | 76.1%

CERTIFICATION & AWARDS

- Certified MERN Stack Developer.
- Appreciation for End-to-End Delivery — BigCommerce client, as stated in the AI/ML resume.

PROFESSIONAL STRENGTHS

Problem Solving • Structured Working Approach • Business-Oriented Task Handling • Team Collaboration • Ownership & Accountability • Continuous Learning • Communication • Time Management • Research • Adaptability

LANGUAGES

English • Hindi
