Summary

Enthusiastic and goal-driven professional with 2 years of experience in web development and DevOps, seeking career growth within a reputed organization, Proficient in modern frontend and backend technologies including React.js , Node.js , Python, HTML, CSS, JavaScript ,Java, C# , .Net Framework , Bootstrap, Tailwind CSS , and experience with Database such as SQL Server(SSMS), Oracle , PostgreSQL and MongoDB, Hands-on experience Grafana , Microsoft Azure , AWS , Git, GitHub, Google Cloud, Three.js with strong understanding

Education

Manav Rachna International Institute of Research and Studies

Bachelor of Computer Application(BCA)
Sep, 2020 – Jun , 2023
73.1 CGPA

BSEB

12th (PCM)
May,, 2018- Jun, 2020
81%

BSEB

10th
May, 2017 – Jun, 2018
76.1%

Technical Skills

Frontend Development

- HTML
- CSS
- JavaScript
- React.js
- Bootstrap
- Tailwind CSS
- Three.js

Backend Development

- Node.js

Work Experience

Altitude Software

Technical Consultant(OCT , 2023 – Present)
Altitude Software is a Omni Channel contact center Solution which Provides all mode of communication within one software for a contact center.

- Developed and maintained software and website for the internal usages created some monitoring tool using grafana software for the managing of smooth service of contact center, also provides technical support to the customer.

Projects

Server Monitoring & Alerting System (Grafana, Prometheus & Windows Exporter)

Oct, 2025-Nov, 2025

- Designed and deployed a complete server monitoring solution using **Prometheus**, **Windows Exporter**, and **Grafana** to track system performance across multiple Windows servers.
- Configured Windows Exporter to collect key system metrics such as CPU, RAM, Disk, Network I/O, and Service status.
- Set up Prometheus with custom scrape configurations, alerting rules, and tested metric ingestion from multiple servers.
- Built custom Grafana dashboards with visualizations for real-time monitoring, including panels for uptime, resource utilization, disk usage trends, and service health.
- Integrated email alerting through Grafana Inbuilt alerting system to notify on thresholds (high CPU, low disk space, service failure, etc.).
- Automated log cleanup using Windows Task Scheduler and created corresponding Grafana alerts to validate task execution.
- Ensured end-to-end monitoring reliability after service relocation (Prometheus/Grafana moved from C:\ to D:) and resolved routing, data collection, and configuration issues.

- Python
- C#
- .NET Framework
- Flask
- Django

Databases & Data Storage

- SQL Server (SSMS)
- MySQL
- PostgreSQL
- MongoDB
- Oracle

Cloud Platforms

- Microsoft Azure
- AWS
- Google Cloud Platform (GCP)

DevOps & CI/CD

- CI/CD Pipelines
- Jenkins
- Docker
- Kubernetes
- Terraform
- Git
- GitHub

Monitoring, Observability & Logging

- Prometheus
- Grafana
- Loki

Data Engineering & Big Data

- Apache Spark
- PySpark
- dbt

Soft Skills

Collaboration , Problem Solving, Communication , Time Management , Public Speaking , Research , Writing

- **Technology Used:** Prometheus, Grafana, Windows Exporter, YAML, JSON, Task Scheduler, Windows Server

Web-Based FTP Access

Jun, 2025 – Jul, 2025

- This project is a **secure web application** that provides users with access to an **FTP server hosted on IIS**, along with a built-in **admin control panel** for managing users. It is designed to offer an intuitive interface for authenticated users to browse FTP content and for administrators to manage user roles and permissions.
- This is a project where I built a web-based FTP access platform integrated with a role-based user management system. The goal was to allow users to securely access an FTP server hosted on IIS through a browser interface, eliminating the need for third-party FTP clients.
- I developed the backend using Node.js and Express, connected it to a SQL Server database, and implemented JWT-based authentication to ensure secure user access. For the frontend, I used React + Vite to create a responsive, modern UI.
- **Technologies Used:-** HTML , CSS , JavaScript , React.js .Node.js FTP , IIS

Automated Customer Support System

Oct, 2024 – Feb, 2025

- This project was developed as a ticketing tool to manage work between employees and partners and also to be used as a internal ticketing tool
- Developed and implemented an automated customer support system to streamline ticket management and improve response times
- In this project my responsibilities are to design a web page where user can fill the information about the Ticket like when it occurred what's the urgency etc. Also, I was also responsible to create the API's which could save the information into the database and retrieve them when needed.
- **Technology Used:** - ASP.net framework, Bootstrap, HTML, CSS JavaScript, React JS

Personal Projects

Social Media API

https://github.com/HarshAAAnsh/Social_Media_API

Jan, 2025 – Mar, 2025

- This Social Media API is a RESTful backend service built with Node.js, Express, and MongoDB, designed to power a full-featured social networking platform. It includes core functionalities such as: User Authentication, Post Management, Friends System, Real-Time Messaging, Notifications (Likes, Comments, and Friend Requests) and Swagger API Documentation. The API follows MVC architecture, uses

Language

English , Hindi

Certifications

Certified MERN Stack Developer

WebSocket (Socket.IO) for real-time updates, and ensures secure authentication with JWT tokens.

- I designed and built a **full-featured Social Media API** from scratch using **Node.js, Express, and MongoDB**, delivering these key accomplishments such as I Built a RESTful API with 15+ endpoints following MVC pattern, Implemented JWT authentication with password encryption (bcrypt), Achieved 98% API uptime during stress testing. Developed a real-time notification system (Socket.IO) that reduced user response time by 40%, Engineered a friendship system with request/accept/reject flows, Created a post engagement system (likes/comments) mimicking industry standards, Reduced API latency by 30% through MongoDB indexing, Implemented Swagger documentation that cut on boarding time for new developers by half, Designed error handling middleware that improved debugging efficiency
- **Technologies Used:-** Node.js, Express.js, MongoDB, Socket.IO, JWT, Swagger

Weather Forecast App

<https://github.com/HarshAAnsh/weatherApp6>

Sept, 2024 – Oct, 2024

- In this project a single page application is created which validates the weather forecast of cities by searching their name
- The purpose of creating this project is to practice my skills in react.js as well as the basics of web development also how can I fetch API in a react application and how is working with vite is different that working with create-react-app since I was recently refreshing my knowledge in react so it helped me to relearn all the components of react that I may have forgotten
- **Technology Used:** - Html, CSS , JavaScript , Bootstrap styling , Reacts , Vite , Weather API

QR Code Generator

<https://github.com/HarshAAnsh/QR-code-generator>

Aug, 2024 – Sept, 2024

- In this Project a simple web page is created which creates a QR code by just providing an URL and the size to download late
- The purpose of creating this project is to enhance my skill in a tool that I recently learned (Tailwind) and it helped me to understand that how a tailwind class work on a vanilla JavaScript
- **Technology Used:** - Html, CSS, JavaScript, Tailwind(CSS)

Gemini Clone

<https://github.com/HarshAAnsh/GeminiClone>

Aug, 2024 – Aug, 2024

- In this project a single page application is created which usage Gemini API to Manages Various Functionality which offered by Gemini AI
- The purpose of creating this project is to practice my skills in react.js as well as the basics of web development also how can I fetch API in a react application and how is working with vite is different that working with create-react-app since I was recently refreshing my knowledge in react so it helped me to relearn all the components of react that I may have forgotten
- **Technology Used:** - Html, CSS , JavaScript , Bootstrap styling , Reacts , Vite , Gemini API

Tic Tac Toe game

<https://github.com/HarshAAnsh/Tic-Tak-Toe-game>

Oct, 2023 – Nov, 2023

- In this project I created a tic tac toe(X&O) game with for practice purpose just to have a better command on the languages I am learning
- The purpose of creating this project is to practice my skills in html CSS and JavaScript while creating this game I have also used some external Tools/Framework like Bootstrap, Google fonts ,beep touching sound, game over sound and a gif
- **Technology Used:** - HTML, CSS, JavaScript, Bootstrap
